# Device Manager

- Configure and manage all of your displays from a single, client-specific, secure web-portal. This ensures that your digital network is secure and scalable to meet your needs.
- Device Manager allows you to easily group and assign your devices to manage everything from your entire signage portfolio to store specific signage to each individual display. This allows you to easily segment and specify content across your entire network.
- Up-to-the-minute reporting accessible through the dashboard allows you to have the tools necessary to monitor the health and status of your network.
- Manage your organization through our user administration console. Through the use of business rules and tiered levels of user access, you have the ability with device manager to tailor your system to your organization.

# Media Management Console

*Upload your assets, create playlists and target your displays.*

- **Upload** - Quickly upload images and videos to your account.
- **Create** - Simple tools to create and manage your playlists and ensure your content is compatible with the resolution of your display(s).
- **Publish** - Effortlessly push your playlists where they need to go with full perspective of the devices under your control.

## Supported Formats

**Video** - mp4, webM   **Image** - PNG, JPEG   **Dynamic** - HTML5
